**TAILORED
PACKAGING**

SEPTEMBER 2020

Love the food
packaging that
loves your planet.

This is big. As big as the planet.

Give your customers extra reasons to love your brand, with the food packaging range that loves the planet.

And there's a simple reason why.

With the Future Friendly range, you can package your delicious food and drinks sustainably, to build your brand responsibly.

How you'll minimise your environmental impact is straightforward too.

Wherever possible, these food packaging products are made from plant based materials. Specifically, bamboo and sugarcane – two resources that grow so fast, they're classed as rapidly renewable. This means you can give your customers peace-of-mind that your food packaging is made from sustainable and responsible sources.

In addition to starting their life sustainably, many Future Friendly products end their life that way too. You'll find paper-board boxes, paper twisted handle bags and paper straws, all of which your customers can happily recycle.

Get to know how sustainability can enhance your brand – choose the food packaging range that's chosen the planet.

We're global specialists in packaging for food and drink.

- ✓ National warehousing coverage
- ✓ HACCP certified warehouses
- ✓ All products manufactured to strict specifications and QC testing
- ✓ Reliable and sustainable procurement to support your business
- ✓ A signatory to the Australian Packaging Covenant

Package your food & drinks sustainably.

Sustainability

Sustainable development meets the need of the present without compromising the ability of the future generations to meet their own needs.

Sustainability is doing more with less.

We strive for developing more sustainable packaging solutions whenever practically possible. Sustainability is an integrated part of our functions. For us, sustainability means environmental protection, social equity, and economic efficiency.

We believe packaging can help deliver sustainability by:

**Reducing resource
usage and
product wastage**

**Lowering health
risks**

**Improving economic
efficiency**

At Huhtamaki Tailored Packaging we deliver innovative solutions that help address complex and challenging needs to grow with the market and unlock value for our customers.

Our Future Friendly range has been created with sustainability at its core.

Terminology

Recyclable: These products can be reprocessed, and the resulting material is manufactured into new products.

Re-pulpable: This refers to the degree to which paper materials can be converted back into pulp during the recycling process to form new fibre sheets.

Renewable: Made from natural resources which replenish to overcome resource depletion caused by usage and consumption, either through biological reproduction or other naturally recurring processes in a finite amount of time in a human time scale.

Rapidly renewable: Materials that are natural and have harvest cycles of under 10 years.

Industrially compostable: This product can be composted in a industrial composting facility. An industrial compost facility is a place where the perfect balance of heat, moisture, and oxygen is created to break down organic and plant-based materials. Our products with this claim are compostable to either the ASTM D6400 or EN13432 certification.

Home compostable: These products can be placed in a home compost bin or the green bins where it will decompose and become soil within a measured period of time. Every component and material used in the packaging will break down and decompose into the soil.

PLA: Polylactic acid (PLA) packaging is produced from renewable feedstock (cornstarch), is compostable in industrial composting facilities. Closed loop composting is required. Recycling is possible in dedicated facilities using closed loop systems.

CPLA: Crystallize Polylactic acid (CPLA) packaging is produced from modified PLA. The PLA must go through a crystallisation process in order for them to withstand high temperatures. CPLA is compostable in industrial composting facilities. Closed loop composting is required. Recycling is possible in dedicated facilities using closed loop systems.

Bamboo

Huhtamaki Tailored Packaging utilises one of the most sustainable materials available, bamboo.

Bamboo grows so fast it's classed as a rapidly renewable resource; in fact, an entire bamboo forest can grow in just a few years. Bamboo regenerates from its roots. So, for a new crop to grow, it doesn't need replanting. Bamboo's strength and heat-resistance make it perfect for producing sustainable and highly-functional foodservice products.

Packaging sustainably with bamboo products allows your foodservice businesses to:

- Reduce your reliance on harvesting wood and paper for food packaging items such as bowls, cups, containers and more
- Increase your reliance on a rapidly renewable resource; bamboo grows so fast – compared to trees – it's classified as rapidly renewable

Sugarcane

To make the Future Friendly range from plant-based materials, Huhtamaki TP reclaims vast quantities of sugarcane pulp, also known as bagasse. Bagasse is a sugar production by-product.

Once the sugarcane's juice is squeezed out, the tough, fibrous pulp remains. Because it's a by-product, bagasse is frequently discarded. However, Huhtamaki TP reclaims sugarcane bagasse and uses it to make Future Friendly plates, bowls, trays, hamburger clamshells and more.

Packaging sustainably with sugarcane products allows your foodservice businesses to:

- Reduce your reliance on non-renewable plastics, such as styrofoam, by replacing it with a sustainable alternative
- Increase your reliance on a resource that's a reclaimed by-product, which doesn't require a heavy investment of new resources to produce

Paper Cups

We know what goes into our cups, how they are made and responsible routes for our products. Where it's sourced is as important as where it ends up.

- We are proud of our sourcing and corporate social responsibility credentials
- The material used in our paper cups is predominantly virgin wood fibre (also known as primary fibre) that has not previously been used in the manufacture of paper board.
- We don't use recycled paper for food contact. This is dictated by our interpretation of legislation and of guidelines set by the European Food Safety Authority
- Fibre is classified as a renewable natural resource
- Our cups are lined with corn-starch, PLA, a rapidly renewable alternative to regular plastic linings.
- The PLA lining is certified compostable to EN13432 and ASTM D6400 in industrial facilities where these exist
- We have single wall and double wall cups available in white, bamboo and our print series with CPLA lids to match.

Containers

Sugarcane hinged containers

Our Sugarcane Hinged Containers are compostable to EN13432 and ASTM D6400 in industrial facilities where these exist.

Features and Benefits

- Reduce your reliance on non-renewable resources such as foams and plastics
- Increase your reliance on one of the world's most sustainable resources, sugarcane bagasse
- Suitable for your chilled, frozen, hot and greasy food
- Choose from a range of shapes and sizes

Hot cups and accessories

How to choose the right cup

Single wall cups

Single wall paper coffee cups are a cost effective and versatile way to cater for beverages. These cups are used in cafes, clubs, colleges and offices. Our cups have a food grade paper lining made from corn-starch, PLA, a rapidly renewable alternative to regular plastic linings.

Double wall cups

Double wall paper coffee cups have an additional outer wall acting as a heat barrier. The cups are comfortable to hold in the hand, while the temperature of the drink is retained for longer. These cups are also lined with corn-starch, PLA.

Single wall

Double wall

Size chart

*Our 8oz uni size allows you to use the same lid for 8, 12 and 16oz cups.

How strong do you like to drink your coffee?

The size of a coffee cup is one of the most important factor for great tasting coffee. A smaller cup 4-8oz generally results in a more flavourful latte or cappuccino and ideally your large coffee should be twice the size of your regular size.

Double wall bamboo hot cups

Serve your customers hot drinks in cups made from one of the planet's most sustainable resources, bamboo.

Features and Benefits

- Double wall cups offer extra heat protection
- Made from bamboo paper - bamboo grows so fast it's classed as a rapidly renewable resource
- Lined with corn-starch, PLA, a rapidly renewable alternative to regular plastic linings
- Choose from a wide range of cup-sizes, black or white lids, and uni-lid options for sizes 8, 12 and 16oz

Cups That Connect

Huhtamaki have partnered with CorporateConnect.AB, who is committed to closing the gap in Indigenous disadvantage, to develop a new range of coffee cups. The cups feature artwork by Keith Brown. Keith is a Ngarabal man from northern New South Wales, he first learned to paint from his brother over 20 years ago.

For more information about this range is available on our website: www.futurefriendlypackaging.com.au and www.davidliddiardgroup.com

Now available in South Australia

Double wall Goanna bamboo hot cups

Every purchase supports Indigenous Australians via Supply Nation certified, CorporateConnect.AB.

Features and Benefits

- Double wall cups offer extra heat protection
- Made from bamboo paper - bamboo grows so fast it's classed as a rapidly renewable resource
- Lined with corn-starch, PLA, a rapidly renewable alternative to regular plastic linings
- Compostable to EN13432 in industrial facilities where these exist.
- The range fulfils your business requirements against the Commonwealth Procurement Policy (IPP), effective from 1st July 2015.

"There is always a story behind an Indigenous artwork"

Supporting your brand with the right packaging.

We can support your business with our packaging for all your products. Wherever we are, we adapt and deliver packaging that meets your needs.

You can print the Future Friendly range with your unique branding. Custom packaging is a great way of advertising your company for a fraction of the cost of other media sources. Plus with our in-house design team, we can ensure your products are perfectly in line with your current marketing imagery or create a whole new look for a new campaign.

We can supply both small local and large national businesses with our packaging. Currently we supply major national fast food retail business and franchise companies with our unique factory to store model.

Factory to Store

Our model offers a unique vertically integrated "factory to store" solution for all national businesses. This model ensures a seamless solution and provides significant cost savings through the removal of duplications in process, products, logistics and the provision of services.

Cutlery

Wooden cutlery

Put your company's sustainable values on show with this wooden cutlery range made from FSC® certified and other controlled material.
